ULTRA-LOW LOSS

Energy efficiency at our core.

ENERGY & CARBON SAVINGS THROUGH SUPPLY TRANSFORMERS

Our Wilson e3 amorphous transformer is the industry leading super low loss transformer product. It avoids energy wastage through transformer losses and helps organisations reduce their operating costs and their emissions. With significant energy savings over the lifetime of a transformer, total cost of ownership considerations are almost always favourable with a Wilson e3.

BENEFITS OF CHOOSING A WILSON E3

- Guaranteed loss savings over lifetime
- Favourable total cost of ownership (TCO)
- Cost effective 2 in 1 Voltage Management solution
- Over 800 installations with proven & reliable technology
- Meets & exceeds Tier 2 (2021) EU Eco Design specs.
- Up to £100k lifetime savings when replacing an existing transformer
- Easy, non-invasive energy efficiency measure
- 24 month guarantee for complete peace of mind

ADD TO YOUR BOTTOM LINE WITH ONE SIMPLE INFRASTRUCTURE DECISION

Our Wilson e3 transformer range provides superior operational efficiency alongside in-built voltage management capabilities, achieving savings in both energy costs and associated CO₂ emissions.

Two types of energy losses are inherent in the running of distribution transformers:

1 LOAD LOSSES THAT VARY DEPENDING ON TRANSFORMER LOADING

2 NO-LOAD LOSSES THAT OCCUR IN THE TRANSFORMER CORE

CUTTING TRANSFORMER LOSSES FURTHER: AMORPHOUS METAL CORE TECHNOLOGY

Core losses are continually present from the day the unit is energised, that is 24 hours a day, 365 days a year. Wilson e3 transformers combine amorphous metal cores with low current density conductors to create a super low loss transformer with significantly reduced losses.

The result? Providing you with guaranteed, easily quantifiable energy savings for your organisation.

FUTURE PROOF YOUR SITE:

ENERGY EFFICIENCY AT OUR CORE

The Wilson e3 transformer combines amorphous core material with low current density conductors to provide a distribution transformer with the lowest combined transformer losses. As a result it not only exceeds EU Eco Design specifications due to come into force in 2021 (Tier 2) but sets ambitious new standards ahead of the curve for Tier 3.

WHAT ARE AMORPHOUS CORE TRANSFORMERS (AMT'S)?

The cores of conventional transformers consist of stacks of laminations that are made from silicon steel with an almost uniform crystalline structure (CRGO). In transformers with amorphous cores, a ribbon of steel is wound to form the core.

The big benefit of amorphous transformers is that amorphous steel has lower hysteresis losses. Simply put this means that less energy is wasted as heat during magnetisation and de-magnetisation of the core (see IR imagery below).

WHAT ARE AMORPHOUS METALS?

Amorphous metals are made of alloys that have no atomic order. They are made by rapid cooling of molten metals that prevents crystallisation and leaves a vitrified structure in the form of thin strips. Due to the lack of systematic structure, this type of metal has also been given the name "The Metallic Glasses".

Infrared (IR) images illustrate significantly lower temperature in an amorphous metal core (right) compared with a traditional silicon steel core (left).

COMPARISON OF PROPERTIES

PROPERTIES	AMORPHOUS METAL	CRGO STEEL
Density	7.15 (g/cm ³)	7.65 (g/cm ³)
Specific resistance	130.00	45.00
Saturation flux density	1.92 (Tesla)	2.03 (Tesla)
Typical core loss (at 50 Hz, 1.7 Tesla)	0.78 Watt/kg	0.90 Watt/kg
Thickness	0.23 mm	0.27 mm
Space factor	0.86	0.97
Brittleness	Higher	Lower
Available form	Ribbon/foil*	Sheet/Roll
Annealing temperature	360°C	810°C
Annealing atmosphere	Inert gas	Inert gas
Special annealing requirement	Magnetic field annealing	-

*(Standard sizes -142.2mm, 172.2mm & 231.4mm)

OUR WILSON E3 DISTRIBUTION TRANSFORMERS ALREADY
EXCEED TIER 2 ECO DESIGN DIRECTIVE SPECIFICATIONS COMING INTO FORCE IN 2021

LOWEST COMBINED TRANSFORMER LOSSES:

THE UK'S LEADING ENERGY EFFICIENT TRANSFORMER

Since its launch the Wilson e3 has been continually developed to improve energy efficiency, and is a distribution transformer product with significantly reduced transformer losses that already significantly exceed Tier 2 Eco Design specifications, setting the bar for ambitious new standards to come (Tier 3)

TRANSFORMER LOSSES COMPARISON

TRANSFORMER CONSTRUCTION	CORE LOSSES (APPROX. [W])	LOAD LOSSES (APPROX. [W])	KWH SAVINGS WILSON E3/PA	£'S SAVINGS WILSON E3/PA*
1950s Transformer (Hot rolled steel - typically pre 1965)	2870	14000	52406	£5,765
1970s Transformer (Early CRGO 1965 to 1985 approx)	1770	13000	38477	£4,232
1990s Transformer (modern standard CRGO - from approx 1985 onwards)	1350	12500	32652	£3,592
2015 Transformer (Tier 1 EU Eco Design compliant)	770	10500	18986	£2088

*based on electricity costs of £0.11/kWh

**All based on 1MVA rating and 70% load.

Please note that the dates detailed above are approximate and an overlap of manufacturing techniques may be evident in transformers commissioned around these milestone periods.

Transformer loss comparison. All values are given in Watts [W] and refer to full load. Figures correct at date of first publication, October 2018.

A HISTORICAL GUIDE TO LOSSES

When calculating the gains associated with upgrading supply transformers to modern super low loss equivalents, the age and construction of the existing unit will make a significant difference.

As a rule of thumb, the older your transformer the worse its performance is likely to be.

How much energy (and money!) is your old transformer wasting away through losses? Find out from our rough guide on typical loss values for transformers manufactured in the last 65 years (based on a typical 1000kVA transformer).

1000kVA COMBINED LOSSES COMPARISON

ARE YOU STILL RUNNING
OLD INEFFICIENT ENERGY GUZZLING SUPPLY TRANSFORMERS?

VOLTAGE MANAGEMENT THROUGH MV SUPPLY

Many sites in the UK are supplied by a higher than optimal voltage that is responsible for significant energy losses in voltage dependent equipment.

Voltage Management is an energy saving technique that reduces these unnecessary losses by improving voltage to site. The Wilson e3 transformer comes with in-built voltage management capabilities that allow for easy adjustment to LV site voltage without the need of costly additional equipment.

TWO AREAS OF ENERGY SAVINGS

1 GUARANTEED SAVINGS THROUGH REDUCED TRANSFORMER LOSSES

Based on a 25-year transformer lifespan, a 1000kVA Wilson e3 transformer will typically save £50,000 over its lifetime when compared with a modern, Eco design Tier 1 compliant transformer.

2 SUBSTANTIAL POTENTIAL SAVINGS THROUGH VOLTAGE MANAGEMENT

The Wilson e3 is designed to deliver a reduced secondary voltage (415 instead of 433V). In addition the units feature an extended tapping range (+7.5%) designed to reduce site voltage at source without the need for costly dedicated voltage management equipment. This reduces plant footprint, avoids additional system losses and eliminates the need for additional plant maintenance.

E3 RANGE, ELECTRICAL CHARACTERISTICS & TYPICAL APPLICATIONS

WILSON E3 DISTRIBUTION TRANSFORMER RANGE:

- Single and three phase transformers
- 100kVA – 3000kVA
- Oil filled ONAN or synthetic ester filled KNAN with insulation class up to 36kV
- Primary voltages typically 3.3kV, 6.6kV, 11kV, 11/6.6kV dual, 33kV
- Secondary voltages typically 280V, 315V, 400V, 415V, 433V, 480V, 690V
- Off-load tap changers (on load tap changer available for Wilson e3+)
- Extended tapping range: -5% to +7.5%
- Corrugated or bolt on panel radiator tanks
- Cable box type or open bushings
- BS / IEC standards or custom specifications

ELECTRICAL CHARACTERISTICS

2000				6	688	13500		7930
2500				6	810	16650		9810

TYPICAL APPLICATIONS:

- Step down distribution transformers
- Step up generation transformers
- Package substations
- Unit type substations
- Data centres
- Wind farm transformers
- Solar PV farm transformers
- 6 Pulse and 12 Pulse rectifier transformers
- Isolation transformers
- Voltage Management
- Battery Storage

TYPICAL ACCESSORIES:

- Oil temperature indicator (OTI)
- Close coupled MV switchgear
- Close coupled LV cabinets /feeder pillars
- Winding temperature indicator (WTI)
- Magnetic oil level gauge (MOG)
- Forced air cooling
- Marshalling box
- Pressure relief device (PRD)
- Bi-directional rollers
- Radiator valves
- Dehydrating breather
